

Expo setup guide (Linux)

1. This guide uses npm. (It comes automatically with node which you need to install in the next step), or find corresponding commands using the package manager of your choice.
2. npm install node
OR GO TO: <https://nodejs.org/en/> and install the latest stable version.
3. npm install watchman (for better performance, can do without).
4. npm install expo-cli --global
5. npx create-expo-app
6. expo start
