

Expo setup guide (Windows)

1. This guide uses npm. It comes with node which the project needs. Install it here: <https://nodejs.org/en/>. Make sure to install the LTS version.
2. `npm i python3` (you can skip this if you already have python3)
3. In the root folder of the app run “npm install” to install all dependencies.
4. `npx expo start`
