

Expo setup guide (macOS)

1. This guide uses npm. You can install it with “npm install node” OR install it from the official website: <https://nodejs.org/en/>. Make sure to install the LTS version.
2. Clone Login gitlab repository named “Login App”
3. npm install ruby (you can skip this if your “ruby -v” is 3.0.0 or later)
4. npm install (installs all dependencies for the project)
5. npx expo start
